The Playground Amateur Radio Club

Grid square EM60qj, Wires-X room "PARC", Allstar node 687390

PARC normally meets the first and third Thursdays of each month at 7:30pm CT and is open to all members & guests. The first Thursday is Tech Night with subjects relating to technical and informative instruction, or demonstrations of interest to all amateurs and enthusiasts. The third Thursday is the Monthly Meeting where everyone is welcome to take part in enjoying the Club as we plan the future!

We also meet most Sundays at 3pm CT for our Pile-Ups! These serve as informal gatherings for collaboration on projects, contesting, operating DX, and more. Come by the Clubhouse at 17 First St. SE, Fort Walton Beach, FL for a tour, and bring any gear you need to troubleshoot or that you need assistance with!

FCC ULS trivia

The FCC only launched the first true chronology[2] for amateur radio when they activated[3] the ULS on 1997-08-11.[4] They defined *time immemorial* for call signs on 1999-08-16 when they promoted the ULS to a system of record.

The FCC *batches* its ULS workload every day and a script runs at night to update the authoritative database we see online. So … if you're waiting for an update and you don't see it in the morning, you can assume it won't appear that day.

Database updates don't just magically appear at the witching hour — each record populates one-by-one into the authoritative database we see online. Other records, *e.g.* new commercial land mobile radio licenses, will populate as well. These batch updates take a couple hours overnight, and you can actually detect new sequential call signs appearing in order in the database minute-by-minute.

Errors in the ULS

We make **NO corrections** to the raw ULS dataset — because every licensee bears a responsibility to give the FCC correct information. Some call signs *do* appear in the wrong city or state, *e.g.* one CA resident who selected "UM" for the minor Pacific islands.

And with that being said…

We ***did*** confront a problem with city names in the ULS. How do we sort a call book by city when people make typos or use variations in spelling? Two cities alphabetically divide "Fort Walton Beach" from "Ft Walton Beach," and "Bolingbrook" is misspelled four different ways. These typos & variations scatter call signs for a given city.

Officers in the Playground Amateur Radio Club who commented on draft versions decided to sort by zip code and *ignore* city/state fields in the ULS. A check of 826,612 active FCC amateur radio call signs revealed 392 licenses where the zip code doesn't match the state while 1,128 unknown zip codes revealed flipped digits and typos, *e.g.* a call sign in 34986 where the licensee entered 36986. We can't blame these typos on the FCC because *all* of the discovered anomalies include an FRN!

Zip code anomalies show up in only 0.18% of total licenses *vs.* state-city anomalies that show up in 1.09% of total licenses. Python's `uszipcode` module renders a common city/state for a zip code, which takes up fewer pages and shrinks the PDF's size.

Our decision means a named neighborhood will get lumped into its overall city. For example: Florida licensees who specify Ocean City, Wright, or Cinco Bayou will find their call signs under Fort Walton Beach — because *that's how the USPS does it*. This controversial topic at the federal level far exceeds the scope of this PDF. Thank you for understanding.

---

2 Records Schedules; Availability and Request for Comments, 60 Fed. Reg. 26904 (May 19, 1995).

3 Federal Communications Commission. (2007). Universal licensing system: Request for records disposition authority (N1-173-08-001). National Archives and Records Administration.

4 Exactly 20 ULS records specify a grant date before 1987-08-11. Data on Joe Walsh WB6ACU begins 2000-04-19 and Ronnie Milsap WB4KCG begins 2007-01-09.
