Introduction

If you can retrieve your wallet license *right now*, then you already know why this ***niche*** PDF "call book" exists. It supports ham radio enthusiasts who suffer little-to-no internet bandwidth while chasing QSOs — or when your favorite search site goes down for (un)scheduled maintenance. The Playground Amateur Radio Club updates it roughly every other month in February, April, June, August, October, and December. Please write to this email address with any comments or suggestions!

Continuing the call book tradition

This PDF "call book" pays homage to the foundational directories of the 1920s when the Dept. of Commerce and the iconic Flying Horse Radio Amateur Callbook helped radio enthusiasts find each other for almost eighty years. Ye Olde typesetting machines have given way to FCC databases, yet the core mission endures:

"Helping the amateur radio community to connect, share information, and advance the craft." Cue the Victrola and fire up that beautiful Collins! Happy hunting…

How to use this call book

This call book lists all active FCC amateur radio call signs **assigned to clubs and other entities**, divided into four main zones: DX territories, DX military posts, DX states, and Contiguous states. Within each zone, the states & territories are listed alphabetically. Under each of those headings you'll find cities listed alphabetically, followed by call signs listed alphabetically:

- Contiguous states
  - Florida
    - Fort Walton Beach
      - **K4FWB** Playground Amateur Radio Club
      - **W4ZBB** Playground Amateur Radio Club

When looking at an individual entry, you'll find basic information about the licensee. Amateur radio call signs assigned to a person include a letter in parentheses designating their operator class. Amateur radio clubs receive no operator class. The licensee's name appears last.

Navigating this PDF is simple. The document includes a built-in Table of Contents (often called "Bookmarks" or "Content" or "Index") that your PDF software can display in a side panel to help you jump to any zone, state, or city. You can locate a specific call sign or person using your software's "Search" or "Find" tool (usually by pressing Ctrl+F or Cmd+F). Search hits will also reveal its corresponding city in the Table of Contents panel.

Pro tip: Search tools look for letter patterns, so a search for `KH0W` will probably also find `KH0WW`. If you get too many results, try typing a space *after* the call sign in your search box to narrow it down.

A call sign with a green dagger † remains valid *beyond its expiration date* because it has a "pending application" connected to it.[1] The FCC confirmed in a 2026-09-11 email: "Applicants that have submitted a renewal prior to their expiration date, may continue to operate while the renewal is pending pursuant to rule 1.62." Some of these pending applications take *decades* to resolve, *e.g.* †`KF6KVD`.[2]

A call sign in **red** signifies it expired and waits in a grace period for renewal. We include these so ham radio clubs can alert local licensees as a courtesy. Roughly 10% of call signs marked "active" in the ULS sit in a grace period — you must inspect the expiration date with your **calibrated eyeballs** to determine its status.[3]

Know this before you print any pages

This PDF is formatted for **legal size** 8½×14" paper. PDF readers usually shrink pages to fit on 8½×11" paper.

---

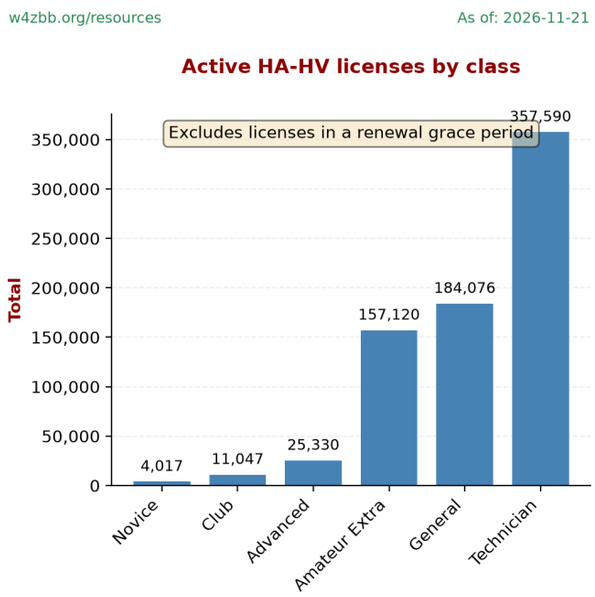

1 The FCC & ARRL lookup pages give you no *visual indicators* to make this obvious.
2 FCC FOIA request 2027-000064 confirmed on 2026-11-16 that KF6KVD may lawfully transmit under rule 1.62. Operators cannot transmit under rule 1.62 if they apply for renewal *on or after* their expiration date.
3 The online article "*Active* call sign probably isn't what you think" will calibrate your eyeballs.

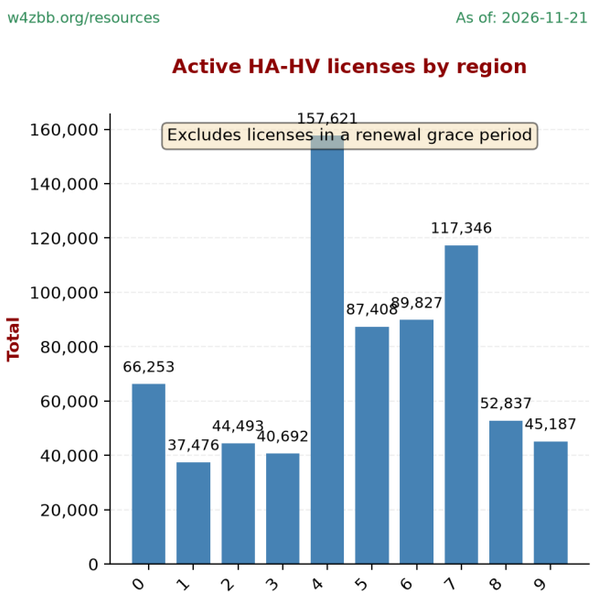

Charts & graphs

The FCC uses "HA" to identify *assigned* call signs and uses "HV" to identify *vanity* call signs. "Active" denotes a currently valid call sign. "Class" denotes each licensee's approved operating privileges. "Group" denotes a letter that represents an amateur radio call sign format, *e.g.* 2×3.

Visit the Playground Amateur Radio Club's resources page to download these charts and many more. We offer a wide selection for instructors who want to snazz up their teaching slides. Also check out Steve Wilcox's Amateur Radio License Geography for his amazing maps!

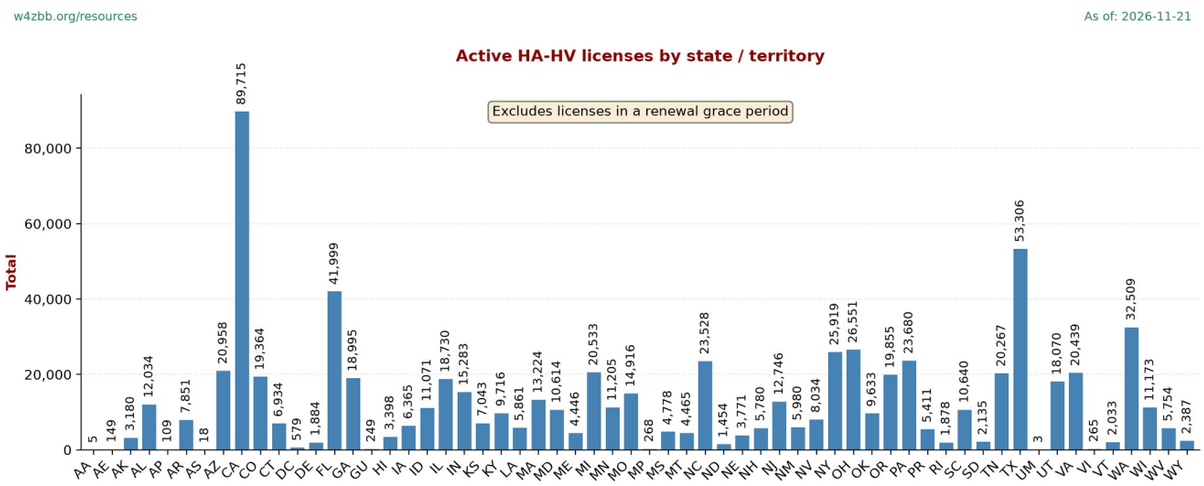

Totals for license classes & regions

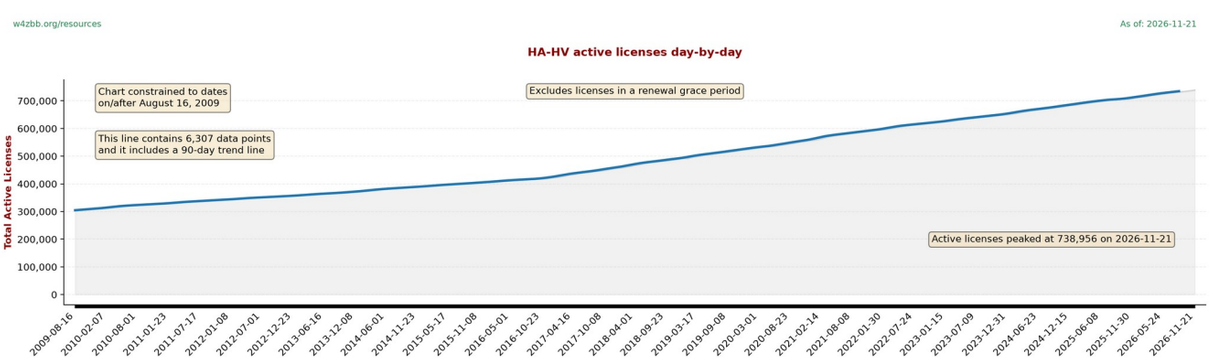

Total licenses in each state / territory

The Playground Amateur Radio Club's resources page has versions of this chart highlighting your state/territory so instructors can snazz up their teaching slides!

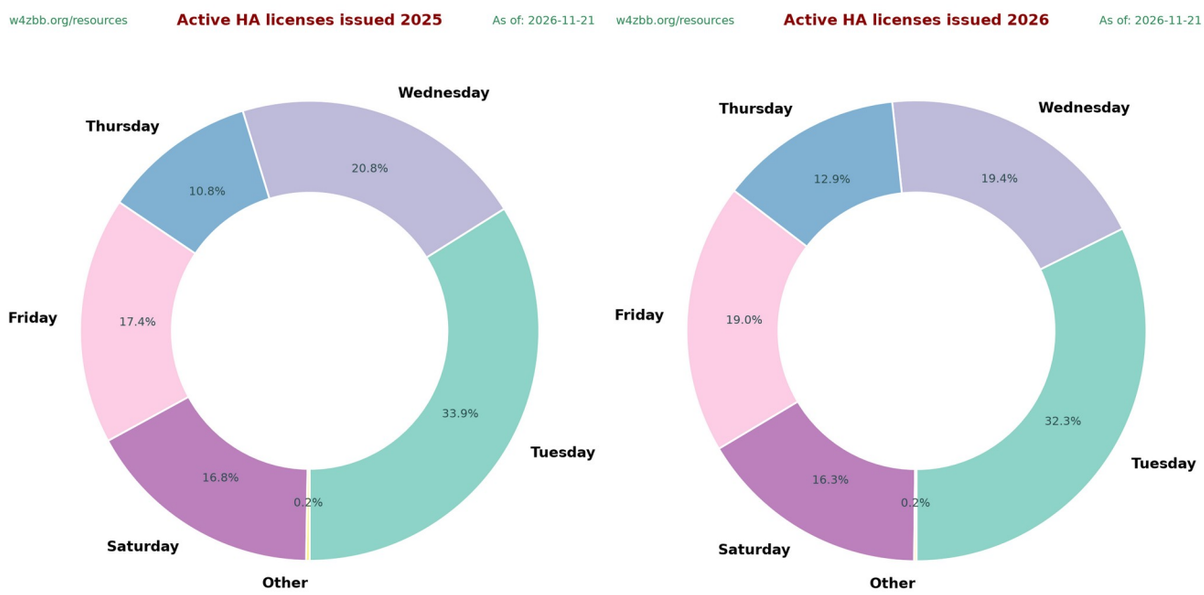

Total amateur operators over time

The number of licensed hams continues to rise above the current rate of attrition.

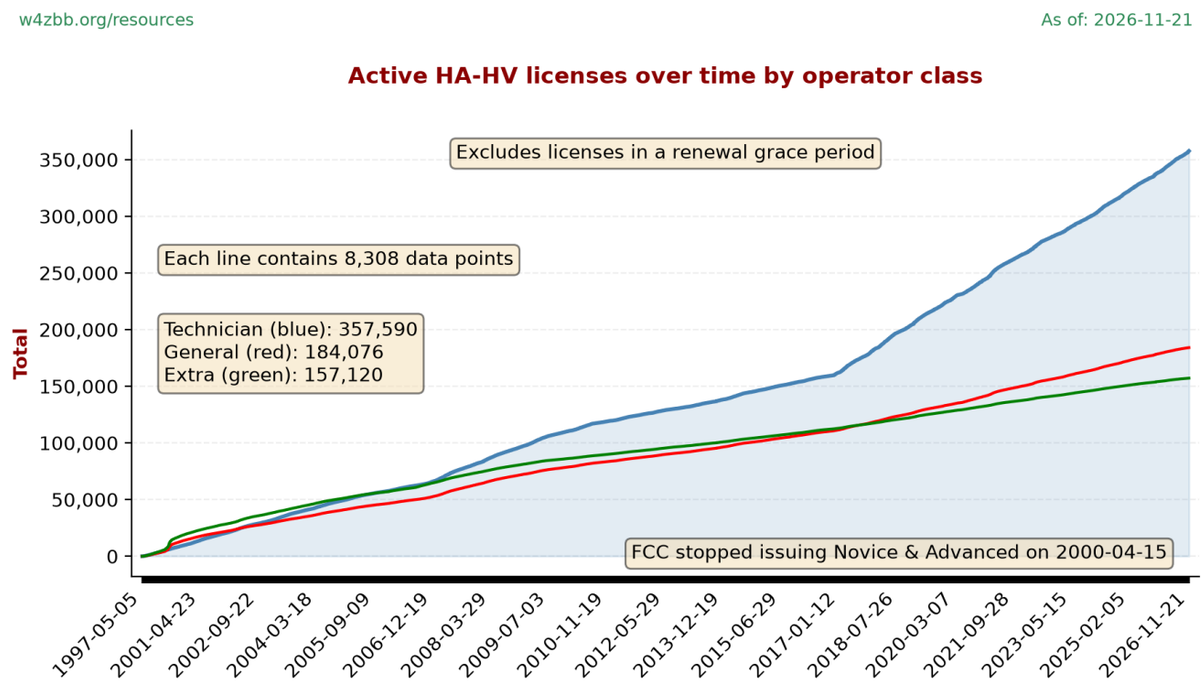

Licenses issued by day of the week

The ULS sees little activity on Sundays & Mondays because the FCC "batches" each day's workload for overnight processing. See "FCC ULS trivia" for more details.

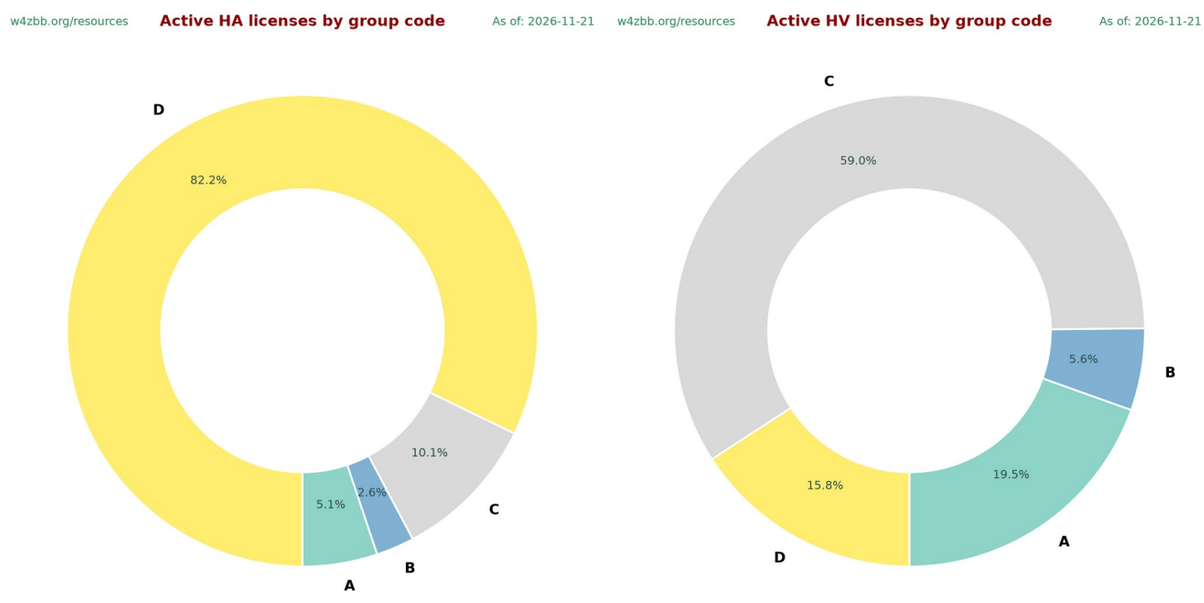

Active licenses issued over time by operator class

Percentages for assigned and vanity group codes

Group "D" dominates the *assigned* call signs as one would expect. Group "C" dominates the *vanity* call signs.

The Playground Amateur Radio Club

Grid square EM60qj, Wires-X room "PARC", Allstar node 687390

PARC normally meets the first and third Thursdays of each month at 7:30pm CT and is open to all members & guests. The first Thursday is Tech Night with subjects relating to technical and informative instruction, or demonstrations of interest to all amateurs and enthusiasts. The third Thursday is the Monthly Meeting where everyone is welcome to take part in enjoying the Club as we plan the future!

We also meet most Sundays at 3pm CT for our Pile-Ups! These serve as informal gatherings for collaboration on projects, contesting, operating DX, and more. Come by the Clubhouse at 17 First St. SE, Fort Walton Beach, FL for a tour, and bring any gear you need to troubleshoot or that you need assistance with!

FCC ULS trivia

The FCC only launched the first true chronology[4] for amateur radio when they activated[5] the ULS on 1997-08-11.[6] They defined *time immemorial* for call signs on 1999-08-16 when they promoted the ULS to a system of record.

The FCC *batches* its ULS workload every day and a script runs at night to update the authoritative database we see online. So … if you're waiting for an update and you don't see it in the morning, you can assume it won't appear that day.

Database updates don't just magically appear at the witching hour — each record populates one-by-one into the authoritative database we see online. Other records, *e.g.* new commercial land mobile radio licenses, will populate as well. These batch updates take a couple hours overnight, and you can actually detect new sequential call signs appearing in order in the database minute-by-minute.

Errors in the ULS

We make **NO corrections** to the raw ULS dataset — because every licensee bears a responsibility to give the FCC correct information. Some call signs *do* appear in the wrong city or state, *e.g.* one CA resident who selected "UM" for the minor Pacific islands.

And with that being said…

We ***did*** confront a problem with city names in the ULS. How do we sort a call book by city when people make typos or use variations in spelling? Two cities alphabetically divide "Fort Walton Beach" from "Ft Walton Beach," and "Bolingbrook" is misspelled four different ways. These typos & variations scatter call signs for a given city.

Officers in the Playground Amateur Radio Club who commented on draft versions decided to sort by zip code and *ignore* city/state fields in the ULS. A check of 826,612 active FCC amateur radio call signs revealed 392 licenses where the zip code doesn't match the state while 1,128 unknown zip codes revealed flipped digits and typos, *e.g.* a call sign in 34986 where the licensee entered 36986. We can't blame these typos on the FCC because *all* of the discovered anomalies include an FRN!

Zip code anomalies show up in only 0.18% of total licenses *vs.* state-city anomalies that show up in 1.09% of total licenses. Python's `uszipcode` module renders a common city/state for a zip code, which takes up fewer pages and shrinks the PDF's size.

Our decision means a named neighborhood will get lumped into its overall city. For example: Florida licensees who specify Ocean City, Wright, or Cinco Bayou will find their call signs under Fort Walton Beach — because *that's how the USPS does it*. This controversial topic at the federal level far exceeds the scope of this PDF. Thank you for understanding.

QU? and X?? suffixes

Only five amateurs remain with a QU? call sign suffix. The FCC always blocked QR?, QS?, and QT? because they overlap the Q-codes. Most probably in 1978[7] they started blocking new QU? suffixes and they let natural attrition take its course.

Only `WA4XYL` remains with an X?? suffix in a 2×3 call sign. Most probably in 1978[8] the FCC reserved it for the Experimental Service and they let natural attrition take its course.

PARC offers ***niche*** analyses of 1-, 2-, and 3-letter call sign suffixes. Download the latest PDF report from our resources page!

---

4 Records Schedules; Availability and Request for Comments, 60 Fed. Reg. 26904 (May 19, 1995).

5 Federal Communications Commission. (2007). Universal licensing system: Request for records disposition authority (N1-173-08-001). National Archives and Records Administration.

6 Exactly 20 ULS records specify a grant date before 1987-08-11. Data on Joe Walsh WB6ACU begins 2000-04-19 and Ronnie Milsap WB4KCG begins 2007-01-09.

7 Research continues of scanned historical documents available online that suggest but have not yet confirmed the FCC blocked 1- and 3-letter X?? & QU? suffixes by no later than March 24, 1978 when they transitioned to the Sequential Call Sign System.

8 *Ibid.*
